

Create excellent atmosphere and enjoy extraordinary taste Golden Jaguar Shanghai

Invested by the catering and entertainment tycoon from Taiwan, Golden Jaguar has brought the luxury buffet culture in China and built up many buffet restaurants in Shanghai and Beijing. In 2007, Golden Jaguar grandly opened a flagship at the vital arterial road in Shanghai downtown area. Adjacent to airport and close to the district where the foreigners gather, the flagship is the landmark visually arresting both inside and outside.

The Golden Jaguar flagship has seven floors and covers more than 2,000 square meters and can accommodate to 8,000 persons at one time, including cafeteria, VIP room, multi-functional conference room, dining hall and other facilities for business and catering. The exterior and interior lighting is designed by Jiang Zhaoyu from Shanghai Engineering Company. His biggest design challenge is to balance luxury, elegance and fashion in a seven-store catering and entertainment complex.

Its 1st floor-cafeteria manifests many key design ideas. This spacious floor is divided into 7 parts: public area, middle-west seat area, front stage seat area, middle-east area, corner seat area, VIP room and outdoor area. So it needs various layers of lighting to create a specific ambiance and atmosphere throughout different area, and such atmosphere also change according to the time of the day. He chose Lite-Puter'20A dimmer pack DX-1220 to achieve this purpose. There are four main modes (scenes): When the meal is in preparation, only switch on the fixtures in public area and switch off the rest fixtures in seat area and VIP rooms; when the dining starts, switch on all the fixtures except those in outdoor area; before the live pop song and jazz performance starts, switch on all the fixtures except the front stage seat area; when the business will be closed, turn all the indoor fixtures to 60%

dimming level to remind the guests. Moreover, Lite-Puter's daylight sensor can automatically recall the light scene according to the daylight change in seasons and the owner's requests to save the manual operation in such a spacious place.

The 26 private dining rooms in 2nd floor use dimmer to fine dimming the pendant lamps in lobby, slot lamps in ceiling and tube lamps on floor to create a cozy atmosphere. The multi-functional dining hall covers 3rd, 5th and 6th floor, which has a high demand on the fully use of the space. So it must be partitioned off or open to be a spacious area to serve business conference, banquet, cocktail party, exhibition and other activities, each of them need a specific lighting mode to create right atmosphere, more important, it must be easily controlled. Jiang Zhaoyu installed Lite-Puter's ECP series control panels on carefully arranged place on the wall to serve the flexible zone arrangement. In each specific activity, just press the button on the panel or IR controller to edit and recall the scenes.

The Golden Jaguar fully aware that Lite-Puter is synonymous with quality. They choose Lite-Puter's products for the entire interior and exterior lighting control the whole building has 1,025 lighting channels. Each floor uses the same products basically: 20A modular dimmer pack DX-1220, fluorescent dimmer pack EDX-F04, and DMX data processor DP-6B. Those combined together offer endless varieties of color combination, scenes and chasers.
