

Grand opening of Lite-Puter's exhibition center in Shanghai

Located at Building 20 of Caohejing Industrial Park, Shanghai, Lite-Puter's exhibition center is not only a show room to display the new products, but also a place to hold mini promotion activities, greet guests and improve the brand image. The modern and harmonious design with Lite-Puter's lighting control product application on the

spot greatly impresses the guests.

Regard of different lighting demands, we separate the office into 9 areas: display area, meeting area, working area, reception area, etc. Especially in the display area and meeting area, we use Lite-Puter's new product and various fixtures to show the special lighting effect; in other areas, we realize green lighting and humanized lighting environment for working.

Display area-art & humanization

This area features the display wall and the ceiling. There are fluorescent strips embedded in the upper and lower side of the curved wall. The display hole on the wall lighted by the halogen light can emphasize the products and vision effect.

There is occupancy sensor on the upper side of the entrance. At working time, the dimming level of lamps in this area will be 30%; when the sensor detects the people's movement, the dimming level will smoothly turn to 90% within 4 seconds; when the people's gone, the dimming level will change back to 30% after 20 seconds delay time. At off-work time, when it detects movement, the dimming value will turn to 60%; when the people's gone, the dimming level will be 0% after 20 seconds delay time.

The fluorescents in warm and cold color on the curved ceiling emphasize the simplicity and stereoscopic effect.

Multi-functional meeting area

There are sensors near the front and back door of the meeting room. According to different lighting demands, we set three modes: 1. Sweeping mode: all lamps will be turned on and the curtain is out of control; 2. Meeting mode: the energy saving lamps in the middle of the ceiling will be turn off, curtain is under control and the dimming level of the projection lamps on the two sides will decrease to 80%; 3. Closing meeting mode: all the lamps will be turn off, the curtain will go up and the sensors will start work.

Notice1: When the sensors detect person's movement, the projection lamps on the ceiling will be turn on; these lamps will be turn off if there's no movement within 20 seconds.

Notice 2: On the sweeping mode and meeting mode, the sensors will stop working.

Energy saving lighting for working environment

In consideration of energy saving, we set 4 lighting modes.

(Working mode)

(Rest mode)

(Off-work time)

(Close mode)

Working mode: in the morning, the lamps in the lobby and working area will turn on, the sensor on the entrance will at working time mode.

Rest mode: the lamps at lobby will turn on and the projection lamps on the working area will turn off.

Off-work mode: only Lite-Puter logo will turn on.

Close mode: all lamps will turn off after 23:00.

Except for scene control, the main controller and touch screen controller can connect to LAN, and accept scene setting and channel monitor online.

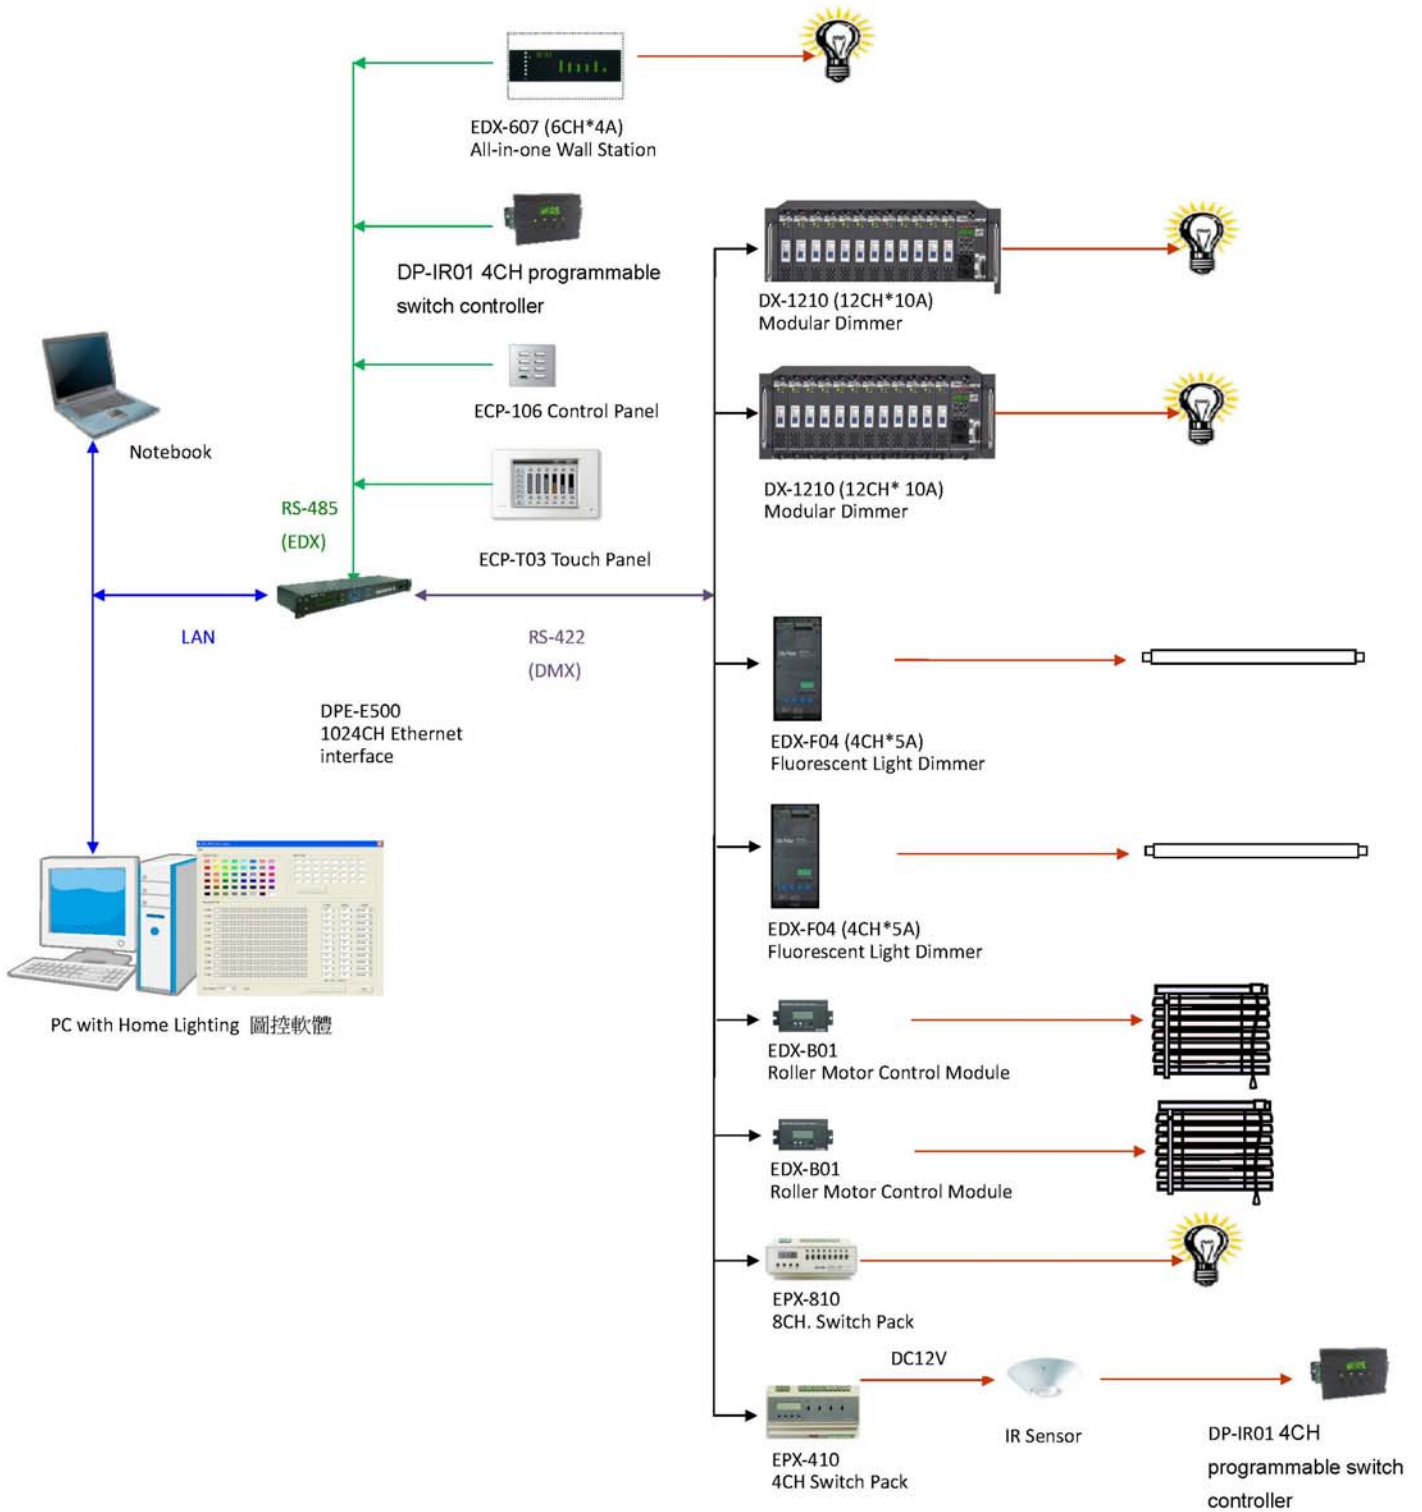

You are warmly welcomed at any time here.
